Auto Ticket Classification using FLOW DESIGNER

Team ID	SWTID-2026-4750
Project Name	Auto Ticket Classification using FLOW DESIGNER

2. Define Problem Statement

Customer / User	Support team members who handle incoming tickets.
I'm trying to	Classify and route support tickets quickly and accurately.
But	Tickets may need to be manually reviewed and categorized.
Because	A large number of tickets can make manual classification time-consuming.
Which makes me feel	Concerned about delays, workload, and incorrect ticket routing.
