Project Title	Auto Ticket Classification using FLOW DESIGNER
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

Project Proposal (Proposed Solution) report

The solution automates support-ticket classification using FLOW DESIGNER, reducing manual sorting and improving routing speed and consistency.

Project Overview	
Objective	Automatically classify incoming support tickets and route them to the appropriate team or category.
Scope	Covers ticket intake, classification, routing, tracking, and workflow automation.
Problem Statement	
Description	Manual ticket classification can be time-consuming and may lead to incorrect or delayed routing.
Impact	Delays and misrouting increase workload and can reduce support efficiency.
Proposed Solution	
Approach	Use FLOW DESIGNER to automate classification and routing based on ticket information and workflow rules.
Key Features	Automatic classification; rule-based routing; workflow tracking; faster ticket handling.

Key Features

? Automatic ticket classification using FLOW DESIGNER.
? Automatic routing to the relevant category/team.
? Reduced manual sorting and faster workflow.

Resource Requirements

Resource Type	Description	Specification / Allocation
Software	Workflow platform	FLOW DESIGNER
Interface	Ticket input / viewing	Web-based ticket interface
Data	Ticket information	Ticket details, category and routing status
Development	Version control	GitHub
Deployment	Execution environment	FLOW DESIGNER workflow environment
