Auto Ticket Classification using FLOW DESIGNER

Team ID	SWTID-2026-4750
Project Name	Auto Ticket Classification using FLOW DESIGNER

Solution Requirements

Maximum Marks: 4 Marks

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority
1	Authentication	Secure login or identity verification for authorized users.	High
2	Authorization levels	Define roles and permissions for users and support teams.	High
3	External interfaces	Connect with ticket input systems or required external services.	Medium
4	Transactions processing	Receive, classify and route ticket information through the workflow.	High
5	Reporting	Generate ticket classification and routing reports.	Medium
6	Business rules, etc.	Apply classification and routing rules using FLOW DESIGNER.	High
7	Compliance to laws or regulations	Protect ticket information and follow applicable privacy requirements.	Medium
8	Other	Allow monitoring of ticket status and classification results.	Medium

Auto Ticket Classification using FLOW DESIGNER

Team ID	SWTID-2026-4750
Project Name	Auto Ticket Classification using FLOW DESIGNER

Solution Requirements — Non-Functional Requirements

Maximum Marks: 4 Marks

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Classification and workflow response should be fast.	Ticket processing should complete within an acceptable response time.
2	Scalability	System should handle growth in ticket volume.	Supports increasing ticket volume without major performance loss.
3	Security & Data Privacy	Protect ticket and user information.	Access control and secure handling of ticket data.
4	Reliability & Availability	Workflow should operate consistently.	Reliable classification and routing with minimal downtime.
5	Usability & Accessibility	Interface should be simple for users and support teams.	Easy-to-use workflow and clear ticket status.
6	Other	Maintainability of the FLOW DESIGNER workflow.	Workflow should be easy to update and maintain.
